

Prepared by the

INTERNATIONAL NARCOTICS CONTROL BOARD

Vienna International Centre
P.O. Box 500
A-1400 Vienna, Austria

in accordance with the
Convention on Psychotropic Substances, 1971
containing the

**LIST OF PSYCHOTROPIC SUBSTANCES
UNDER INTERNATIONAL CONTROL**

consisting of:

Part One: Psychotropic substances under international control as listed in Schedules I, II, III and IV of the Convention on Psychotropic Substances, 1971.

Part Two: Alphabetical listing of the names (including trade names) of psychotropic substances listed in Schedules I, II and III, their salts and preparations.

The frequent introduction by the pharmaceutical industry of new preparations of psychotropic substances, and the withdrawal of old ones, makes the updating of the present list necessary for the effectiveness of controls. In pursuit of this objective, INCB has now established a database containing a list of such preparations. Governments are kindly requested to provide INCB with any addition and/or deletion as well as amendments to the present list.

Part Three: Table of conversion factors needed to convert quantities of psychotropic substances in salt form into quantities of pure anhydrous base content.

Part Four: List of countries that have prohibited the import of certain psychotropic substances pursuant to article 13 of the Convention on Psychotropic Substances, 1971.

This document has been prepared by the International Narcotics Control Board to assist Governments in completing the annual questionnaire on psychotropic substances (Form P) and the quarterly questionnaire on Schedule II substances (Form A/P).

For information concerning names used for substances under international control and preparations containing such substances, as well as chemical and structural formulae, and other technical information, see, *Multilingual Dictionary of Narcotic Drugs and Psychotropic Substances under International Control*, E/F/S.93.XI.2, ST/NAR/1/Rev.1.

*This INN refers to only one of the stereochemical variants of *delta*-9-tetrahydrocannabinol, namely (-)-*trans*-*delta*-9-tetrahydrocannabinol.

INTERPRETATION GUIDELINES CONCERNING THE STEREOISOMERS OF SUBSTANCES IN SCHEDULES II, III, AND IV OF THE 1971 CONVENTION¹

1. When the substance listed can exist as stereochemical variants the following should apply:
 - (a) if the chemical designation of the substance used in the Convention (or in a subsequent scheduling decision of the CND) does not include any stereochemical descriptors or indicates a racemic form of the substance:
 - (i) if the molecule contains one chiral centre, both the *R*- and *S*-enantiomers and the *RS*-racemate are controlled, unless specifically excepted by a decision of the CND;
 - (ii) if the molecule contains more than one chiral centre, all the diastereoisomers and their racemic pairs are controlled, unless specifically excepted by a decision of the CND;
 - (b) if the chemical designation used in the Convention (or in a subsequent scheduling decision of the CND) for the substance which contains one chiral centre in the molecule includes a stereochemical descriptor indicating a specific enantiomer, the racemic form of the substance is also controlled unless specifically excepted by a decision of the CND while the other enantiomer is not controlled;
 - (c) if the chemical designation used in the Convention (or in a subsequent scheduling decision of the CND) for the substance which contains more than one chiral centre in the molecule includes stereochemical descriptors indicating a specific diastereoisomer, only that diastereoisomer is controlled.
2. When one enantiomer is controlled, then a mixture of that enantiomer with the other enantiomeric substance is controlled.
3. The chemical designations and International Non-proprietary Names (INN) used in the scheduling decisions to define substances in Schedules II, III and IV of the 1971 Convention were considered appropriate at the times when such decisions were made. It should be understood that:
 - (a) alternative chemical designations constructed according to modified chemical nomenclature rules may be used in official documents as long as they preserve the stereospecificity when appropriate;
 - (b) if any subsequent modification of an INN definition uses a chemical designation which is different to that in the scheduling decision, such an INN should be omitted from official documents.

¹Also applicable to Schedule I, in addition to the clarifying phrase that was added to it by the CND.

PART TWO. — NAMES, SYNONYMS, AND TRADE NAMES OF CERTAIN PSYCHOTROPIC SUBSTANCES, THEIR SALTS OR PREPARATIONS UNDER INTERNATIONAL CONTROL

The names of psychotropic substances, as given in the 1971 Convention, and the International Non-proprietary Names are printed in bold type. They are accompanied by a page reference to Part One, where the chemical formulae and trivial names of psychotropic substances, if applicable, can be found.

The other names, synonyms, or trade names apply either to pure psychotropic substances, the salts of psychotropic substances, or to preparations containing either the pure substance or its salt form; in such cases, the name, synonym or trade name is accompanied by the name of the controlled substance given in Part One. These names are limited to Schedules I, II and III controlled substances.

This list is not exhaustive, and the absence of the name of a preparation containing a psychotropic substance does not mean such a preparation is not under international control. Preparations containing psychotropic substances under international control may have the same name but different formulations in different countries. In such cases, therefore, reference should be made to the composition as indicated on the product label and the name of the substance in question always should be checked against the chemical designation or formula for that substance. A preparation may contain, in addition to internationally controlled psychotropic substances, other non-controlled substances. Such a preparation is subject to the same measures of control as the psychotropic substance which it contains, and, if it contains more than one substance, to the measures applicable to the most strictly controlled of those substances.
